Sitrep on ☐ Radio Project

1. During a recent visit to Vienna we inquired as to whether there were any new developments or conditions affecting the radio developments of the ☐ stay-behind project. ☐

☐ pointed out to us the nature of the ☐ Chain and the role ☐ himself plays in it. We believe that it would be of interest to have a copy of the ☐'s schematic. We assume it will be available to FBM shortly.

2. We had lost two generators which were assigned to the ☐ project while they were in transit to Vienna. Efforts are being made to uncover these items through RTG and Quarter-master facilities. However we are preparing to have a duplicate shipment ready by the time ☐ will depart for Vienna. We assume the thaw will set in by then and ☐ will be able to conceal these units somewhere in the general area where the sets are now buried. ☐ will disinter sometime during the Spring the radios previously forwarded. He will examine them for usability and if necessary to replace them we will accomplish this before ☐ departs for Vienna. ☐ will also be given a refresher course by ☐. We believe that this is necessary inasmuch as in May one year will have elapsed since ☐'s training at our school. ☐ has been issued the signal plan BLUNN which he has buried somewhere in the vicinity of the cached radios. ☐ has not received the exact concealment date. Upon receipt of this your office will be notified.
